Boom Lifts

Boom Lifts Training Ottawa - Boom lifts are equipment that has a platform that can be lowered or raised to various heights, therefore making this piece of machinery an important necessity in a wide range of professions. Accessible in quite a few specialized types such as aerial lifts, scissor lifts, and knuckle boom lifts, each model functions very specifically.

Aerial platform lifts are most frequently utilized to transport people at snowboard lodges who are not at ease with a snowboard lift. These lifts function very similar to an elevator, snowboarders can be gradually shuffled up the mountain, stopping at stations along the path until they reach the top. Aerial platform lifts are also used in construction, transporting workers securely up and down the sides of multi-level building sites.

Scissor hoists are quite frequently utilized by utility companies as the perfect way to safely permit workers to fix and work on cables and wires attached to poles. Phone, cable and power providers have relied on the effectiveness of this kind of boom jack for years.

Knuckle boom forklifts are made to be utilized in rough terrain locales where the need to be able to reverse course is necessary. This style of boom is able to fit into many tights places that a scissor jack cannot. Working between numerous equipment in a production plant or in near proximity stuck between two walls, the knuckle boom also features a standard platform outfitted with rails for security and employee safety.

The type of boom lift needed by organizations will normally depend on the nature of the job required. Fortunately, there are suitable designs for practically any duty.
