Reach Trucks

Reach Truck Training Ottawa - Reach Trucks are industrial equipment used for loading and storage in certain businesses that maintain storage of cargo to finished commodities on a pallet which are then placed into high shelving units. This loading machine helps businesses safely and easily amass and retrieve loaded pallets at the same time as ensuring enough storage of merchandise that are not immediately needed.

The basic reach truck utilizes an out rigging mechanism installed on the front of the vehicle. A pair of telescoping forks that move up and down are mounted to the out rigging. A hydraulic setup which enables the worker to grab and reposition the load over the outriggers is also included in the forks. This design gives a more even balance of the weight and allows simpler maneuvering among the storage shelves and small aisles.

After arriving at the specific shelves designed for the pallet, the hydraulics allow the forks to swing and slide the pallet into place. A reach truck will typically fit into an aisle less than 10 feet across without any issue so long as there are no hindrances protruding from the shelving.

There are quite a few different versions of reach truck on the market. The simplest unit is a stand up model that you can slide the forks under the pallet and then transfer it to another location for storage, then slide it into place. Normally this design of reach truck is advantageous for shelving units that are only one pallet deep. A double-reach truck works in the same fundamental way as the stand-up type but uses telescopic forks that are long enough to slide a pallet into shelves that accommodate two pallets. Straddle reaches are an alternative reach truck variation. This kind of reach truck slides beneath the pallet and is also able to grab the sides as well. The straddle reach unit is advantageous when grasping the sides of the pallet and merchandise will not result in breakage. They allow straightforward pallet retrieval of a pallet that may be 4th or 5th in line and are useful when the shelving units are accessible in more than one direction.

Production plants, warehouses and even textile businesses regularly utilize one or more types of reach truck. They can be used to stockpile pallets of finished goods, storing supplies, materials, equipment, and to maintain the up keep of storage units is familiar practice. Reach trucks are very straightforward equipment to maneuver to help make good use of your time and accessible warehouse space.
