

Ottawa Forklift Training Classes

Ottawa Forklift Training Classes - Lift trucks are a kind of heavy lifting equipment utilized in order to handle and move material safely and efficiently. Sometimes called Lift Trucks, they are used in various businesses. Staff working around and with forklifts have to be trained to spot dangers associated with the operation of lift trucks.

We offer training classes known as Safe Operation of a Forklift. The classes provide instruction in the theory part of becoming a lift truck operator. Trainees would learn their legal tasks as lift truck operators. Upon finishing the classes, a printed certificate will be given. The certificate needs to be signed by an individual authorized to verify that a hands-on evaluation has been finished in the trainee's workplace.

Forklift Safety

Lift trucks are made use of extensively in industrial work environment due to their ability to transport and lift heavy loads. These industrial machinery are indispensable and essential for lots of organizations, yet they can be dangerous if utilized by employees who is not properly trained. Lift truck injuries, when they happen, tend to be serious due to the power of these heavy machinery. Staff who work regularly around lift trucks can become complacent and forget about the dangers. Vital operating and maintenance measures may be ignored.

Forklift training is required not only for new employees. Periodic re-training is vital for all operators. First aid training is important also.

Daily inspection procedures are of critical importance. Forklifts can become damaged if they are not checked regularly. Prior to being used, lift trucks must be visually inspected as to their general condition. An operational check must be done to be able to determine the machine is working properly. The supervisor should be informed if anything is noted which can affect the safe use of the forklift.

Inspections must include inspecting the work area to make certain it is clear of objects that might be a problem. Overhead obstructions and objects must be inspected also. It is essential to have a functioning fire extinguisher available and accessible. Various levels must be inspected, such as fuel, radiator water, engine oil, and electrolyte levels in cells. Cables, plugs and batteries should be checked. Clean out vent caps and ensure that bolts, nuts, chains, guards, and hydraulic hose reels are not loose, damaged or missing. A tire inspection will ensure that wheels are not damaged or worn. Pneumatic tires would need a pressure inspection.
