## **Ottawa Scissor Lift Operator Certification**

Ottawa Scissor Lift Operator Certification - North American regulators recommend that workplaces require operators of scissor lifts, booms or aerial work platforms to get certification training. Scissor lift operator certification is not mandatory, but there are advantages to making certain that this particular training is provided to all operators.

To enable employees to get to high levels, the scissor lift is a work platform made along with a pantograph, which is a linked, folding support which shaped in an 'X' pattern. Upward movement takes place when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by elongating the 'X' pattern. A bridge extends from some platforms to allow convenient access to the work place.

The platform descends to the ground by manually releasing a valve. The platform returns through simple release of hydraulic or pneumatic pressure. This is the main reason that scissor lifts are the machinery of choice at worksites.

Operators that are both inexperienced or experienced would be able to get some benefit from proper scissor lift training. A scissor lift operator certification program can be particularly designed to accommodate for those lifts used at your workplace. The trainees' certificate of training will list the models of equipment on which they trained.

The classroom instruction includes the following subject matters: introduction to scissor lift training; rules and guidelines, authorization and attitude; safety rules and common dangers; Occupational Health and Safety; workbook and record of training (ROT)

The in-class session will conclude with a written examination.

Practical hands-on training includes instruction on the following: pre-operational check; safety equipment;; function test checklist; operators handbook; regular maintenance and the practical session would conclude with a demonstration of proficiency.
