Ottawa Aerial Lift Train the Trainer

Ottawa Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to efficiently train operators in safe industrial mobile machine operation. Trainers are given in-depth instruction on aerial lift equipment. The program is offered on an open enrollment basis and delivered at selected training places. Before the certification, trainers are evaluated and scored on their knowledge and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the best training provider in the industry, we offer top notch hands-on training. We offer lots of chances to practice the techniques and concepts that are taught inside the classroom. In addition to hands-on experience, trainers develop general understanding of instructional techniques and equipment theory, classroom and field communication skills, and ability to effectively train and assess operators. Trainers will gain knowledge of what traits make an effective trainer.

The Aerial Lifts Train the Trainer Program likewise teaches the correct methods needed to be able to express the correct information inside the classroom and field environment. There are three factors of machine operation which the trainer must learn how to convey to operators: what to carry out; how to do it; and the reason why it must be done.

In the program, trainers would be provided with the detailed, latest reference material to better help them convey the information to equipment operators. The manuals used, include detailed information about all aspects of industrial mobile machine operator training. Incorporated in the package are training aids that provide a visual reference to enhance the learning experience. The equipment-specific training products include essential materials intended for both the operator and the trainer: videos/DVD's, overhead transparencies, equipment models, safety message posters; stability pyramids and digital training aids.
