

## Ottawa Wheel Loader Training

Ottawa Wheel Loader Training - Usually, the various types of heavy equipment training are divided into 2 categories of equipment: those that have rubber tires and tracked vehicles. Tracked vehicles consist of items like for instance excavators, cranes, and bulldozers and they are commonly used in the majority of this kind of heavy equipment training. Normally, the rubber tire training involves the rubber-tired versions of cranes, earth movers and end loaders. Heavy equipment training also includes the use of different rubber-tired vehicles such as scrapers, dump trucks and graders. Training centers often offer truck driver training for the many types of heavy equipment training.

The majority of all heavy machinery runs on diesel fuel and as such, the fundamentals of diesel mechanics are a main component of heavy equipment training. Normally, a basic course on diesel mechanics is typically required of trainees. Among the main goals of the program are to be able to educate an operator about maintenance procedures and basic troubleshooting in case of a problem with the machinery. Often, this training saves a mechanic from being called out in the middle of nowhere simply because a piece of machine needs the addition of something minor like engine oil. Diesel mechanics for heavy machinery is an education all unto its own; hence, extensive training is not normally offered in the course book for the general training course.
