Ottawa Counterbalance Forklift Training

Ottawa Counterbalance Forklift Training - Counterbalance Forklift Training courses are always in high demand. The Counterbalance forklift is a forklift which is made along with a weight which counters the balance, equally spreading the weight of the load across the arms of the forklift. Counterbalance forklifts are designed so the weight on the lift is counterbalanced by the weight behind the centre of gravity. The load is projected out from the front of the machine so it is visible to the driver of the forklift. This particular kind of forklift truck must just be used on stable, level ground or on a prepared surface.

Training is necessary for forklift operators to understand the right method to distribute the load equally across the forklift arms. Trainees would know how to lower and raise the load vertically and how to tilt the mast of the forklift both forwards and backwards between 5 and 15 degrees. Trainees will be taught the RTITB standards needed for safely operating the forklift. Trainees will likewise know the kinds of attachments for the arms of the forklift.
